

Audio Mostly Website Backup

Dave Moffat - me@davemoffat.com

March 14, 2018

Notes - Cannot check the Binero settings or produce images for the tutorial, due to Binero password change.

1 Use plugin to create current site backup

1. Log into the Audio Mostly wp-admin site that you would like to copy (<http://audiomostly.com/wp-admin/>)
2. Open the “All -in-One WP Migration” plugin
3. Go to “Export Site”, and Export to File
4. An archive of the site will be created

2 Create new subdomain site

1. Log into Binero (<https://login.binero.se/>)
2. Select the websites tab
3. Follow the instructions on screen to create a new subdomain eg. 2018.audiomostly.com
4. This will create a new directory in the file manager

3 Install instance of WordPress on subdomain

- Select the installation option
- Select a wordpress instance to install
- Install wordpress to the newly created directory
- Wait for wordpress to complete

4 Install backup plugin to new site

1. On the new site, log in via wp-admin
2. Install the “All -in-One WP Migration” plugin

5 Move backup file from old site to newly created site

1. log into the file manager or ssh server
2. open directory '*OldWebsite*/wp-content/ai1wm-backups/'
3. find the most recent '.wppress' file
4. copy that file to the '*NewWebsite*/wp-content/ai1wm-backups/'

6 Restore from backup file

1. Log into the new site wp-admin panel
2. Open All-inOne WP Migration Backups
3. Select the most recent backup, it should be the only one there, and restore from backup
4. Follow the instructions on screen
5. Once the backup is complete, ensure you update the permalinks
6. Click update permalinks - `wp-admin/options-permalink.php`
7. Click 'Save Changes'
8. Test the new website
