Description			
<p>I have changed the FlexiNoteLayer so that notes are numbered.</p> <p>In order to do that, every time a note is highlighted I cycle through all notes and count up to the last note displayed, essentially: https://code.soundsoftware.ac.uk/projects/svgui/repository/entry/layer/FlexiNoteLayer.cpp#L804</p> <p>I have a feeling that that's a bit inefficient. I noticed that, <i>whether I do this or not</i>, just vigorously moving the mouse over the visible FlexiNoteLayer can get me around 80% CPU load.</p> <p>Doesn't otherwise seem to affect anything. Should we worry about that?</p>
