#### Description

I'm currently having a great pleasure using Sonic Visualiser for annotating onsets on musical tracks.

In fact I first run the QM onset detection and then correct manually. My task mainly consists in removing false positives.

The software is well designed, and convenient, I can navigate between the existing time instants with the Page Up/Down keys.

However, it would be really great to have a keyboard shortcut to delete the current time instant, because actually I need to click it with the mouse, which costs time and is useless (since I am on a time instant with Page Up/Down, I should have to locate it).

I realize you might already have millions of keyboard shortcuts, but if you find it useful... thanks in advance.
