Description

When something goes wrong during the test, and only a console dump, or partial XML is stored, or when you want to use data collected with a different test interface (e.g. MATLAB APE), it could be useful to build or fix a result XML file. For easy processing and visualising data, it is sometimes necessary to have all results in XMLs of the same format.
Perhaps a HTML interface, similar to the one for setting up tests, would be useful for this.
