Web Audio Evaluation Tool - Bug #1313
Crash when loading a page

2015-06-29 09:13 PM - Brecht De Man

Status:	Resolved		**Start date:**	2015-06-29
Priority:	Low		**Due date:**	
Assignee:	Nicholas Jillings		**% Done:**	0%
Category:			**Estimated time:**	0.00 hour
Target version:				

Description

Happened a few times, once during a live test. Gets stuck in 'loading' mode, and nothing gets loaded. The bottom-most error keeps on happening to infinity. Happens at the start of the test or on second/... page.

See screen shot.

Related to #1229: in case this happens halfway through a test, it should be possible to save all results until then!

History

#1 - 2015-06-30 12:18 PM - Brecht De Man

- Priority changed from Immediate to Low

Update: this last time was because of a missing audio file so happened every time. When this (or something that looked similar) happened earlier, I don't know what the reason was because running the whole test again (thankfully this was at the beginning of an experiment) did fix it. Will keep updated.

#2 - 2015-07-01 12:09 PM - Nicholas Jillings

- Status changed from New to Resolved

The audioObject will post to the console if it cannot load the audio file. I have further expanded on this to automatically stop the session and create a partial save with an extra tag explaining why there was a crash.
