

VamPy Host - Feature #1323

Ability to set step and block size when loading plugin through high-level API

2015-07-07 05:56 PM - Chris Cannam

Description

Currently when using the high-level API, the step & block size are always set to the plugin's preferred defaults.

This can cause problems (as in #1316) and of course sometimes you just want the flexibility. Setting a window shape might occasionally be useful as well. Add a way to provide step and block size at the same time as providing plugin parameters in calls such as `collect()`.
