

Web Audio Evaluation Tool - Bug #1394

PHP and Python scripts should return confirmations of saving

2015-09-10 01:21 PM - Nicholas Jillings

Status:	Resolved	Start date:	2015-09-10
Priority:	High	Due date:

Target version:			
Description			
Currently the Python script returns an HTTP code depending on the saving result, however the PHP script will return the HTTP OK code (200) even if the data was not saved. This could happen on servers with PHP not enabled where the server will host the script itself as a file, and so returns the file.

- % Done changed from 0 to 40

PHP returns short XML containing status and file URL if completed, otherwise returns error message. Core will dump this status into the console. If error returned, core will present 'Save File' popup to user.

- Status changed from New to Resolved

Both PHP and Python servers now respond with a confirmation of saving, otherwise an explanation of the error. Core requires both an HTTP 200 code and the XML status OK code.
