

Web Audio Evaluation Tool - Feature #1456

Files saved to server: higher resolution than seconds (or hash)

2015-11-23 02:49 PM - Brecht De Man

Target version:			
Description			
<p>When files are saved to the server, they now have a file name like 'save151118100432.xml' - i.e. YYMMDDhhmmss. This may be a problem if two people submit at the exact same moment, which is not completely impossible when doing this test in a class room, let alone very large scale.</p> <p>N: "Millisecond may be useful but perhaps just an extra index afterwards will also be useful."</p>

PHP server adds a six character 'hash' to the file name. Just a random string generator but should suffice.
