Target version:			

Description

To allow for tracking of listening level, add a slider that changes the total gain as an interface element. That way, someone could set up the test with a calibrated level, while allowing the subject to change the volume and tracking these volume changes.

- Status changed from New to Resolved

Implemented in dev_main. Use `<interfaceoption type="show" name="volume"/>` in your `<interface>` node to show. All our included interfaces show this in the top left of the window.
