Description

This has been reported to me by someone else but I didn't think much of it as it seemed unlikely this would be caused by WAET at the time.

I've now experienced it myself though.

Just loaded the test and then I noticed there was a high-pitched, continuous 'beep' in the (sawtooth wave kind of sound) in the right channel. See attached for a quick recording.

It also changed octave (used to be lower first) but that might be due to output and/or sample rate switching for recording.

History

#1 - 2015-12-21 12:45 PM - Brecht De Man

Had this again, example project, Safari on Mac OS X.10.2. No idea what other circumstances might have contributed to it.
