Web Audio Evaluation Tool - Bug #1464
Random string at the end of saved file name doesn't work when same file stamp

2015-11-26 03:07 PM - Brecht De Man

Target version:				

Description

The very purpose of the random string is to NOT overwrite files saved at the same time, but this does not seem to happen. Rather, I hit enter on two machines at once, and both results were saved with a 200 code… but both with the same name, so one has overwritten the other.

It seems that whenever the time is exactly the same, the generated string is also the same (unless I got very, very (un)lucky that a truly randomly generated string came out the same).

(Both say '[Log] Save OK: Filename "saves/save151126134348-lUoLN8.xml",33701B (core.js, line 685)')

It was a different HTML file, different set of songs etc. Both in Safari.

- % Done changed from 0 to 50

PHP Server now performs SHA1 hash to end of the filename instead of random string generation.
