Description			
Had this a few times: I respond to this mandatory question (post-test, 'what is the genre'), I hit enter, and it shows me the 'this question is mandatory' error a few times. See also console log (might be due to some questions/radio buttons among the 'comment boxes?'). Just using the example project.xml again.

This should be fixed along with bug #1490, the problem was the binding for capturing the enter key presses was being added each time the popup was being created, but not cleared. So at the beginning for the preTest you have enter = 1 'button click' for proceed, then do the test. Then the post-test of the first page adds another bind so hitting enter = 2 'button clicks' and so on. At the end it actually hits an error because a radio button cannot be empty (it can rather I need to allow the response to be empty).
