### Description

When going to [http://localhost:8000/index.html?url=example\\_eval/myfile.xml](http://localhost:8000/index.html?url=example_eval/myfile.xml) if the file cannot be found, the user should be displayed an error message, instead currently it does not see anything happening on the page.

Console currently logs

```
Failed to load resource: net::ERR_EMPTY_RESPONSE
```

### History

#### #1 - 2016-02-22 02:39 PM - Nicholas Jillings

Included in dev\_main, along with a little on-page explanation of how to solve.

#### #2 - 2016-02-22 02:39 PM - Nicholas Jillings

- Status changed from New to Resolved

#### #3 - 2016-02-22 08:29 PM - Giulio Moro

- Status changed from Resolved to In Progress

When running with apache I get something like

```
FATAL ERROR
```

The XML validator returned the following errors when decoding your XML file

```
document.xml:1: parser error : Space required after the Public Identifier
```

```
<!DOCTYPE HTML PUBLIC "-//IETF//DTD HTML 2.0//EN">
```

```
^
```

```
document.xml:1: parser error : SystemLiteral " or ' expected
```

```
<!DOCTYPE HTML PUBLIC "-//IETF//DTD HTML 2.0//EN">
```

```
^
```

```
document.xml:1: parser error : SYSTEM or PUBLIC, the URI is missing
```

```
<!DOCTYPE HTML PUBLIC "-//IETF//DTD HTML 2.0//EN">
```

```
^
```

I guess it is trying to parse as XML a 404 html page

*- Status changed from In Progress to Resolved*

Fixed somewhere along the way in dev\_main
