Description

Warning: date(): It is not safe to rely on the system's timezone settings. You are *required* to use the date.timezone setting or the date_default_timezone_set() function. In case you used any of those methods and you are still getting this warning, you most likely misspelled the timezone identifier. We selected the timezone 'UTC' for now, but please set date.timezone to select your timezone. in /Users/giulio/www/waet/save.php on line 6

this happens with the apache2 version that comes bundled with Mac OS X el capitan

History

- Status changed from New to Resolved

Will default to Europe/London zone for file-saving. However
