Web Audio Evaluation Tool - Feature #1658
Allow xml with zero testpages

2016-03-09 05:24 PM - Giulio Moro

Target version:				

Description

This way you can use this just to run quick surveys.

This would be possible by fixing #1629, although when validating the file, the validator requires <waet> to have at least one <page> child. This should be fixed as well

History

Aren't there better survey only tools out there (survey monkey comes to mid)? If there are no <pages> the tool will throw an error because it cannot build the state maps and storage nodes. Hence why a minimum that there is a page (because this tests audio).

#2 - 2016-05-04 02:30 PM - Giulio Moro

- Priority changed from Normal to Low

found a way to embed google forms in your apge, so that you can set a custom return URL (e.g.: start with google form and then redirect to the survey once it is done).
