Web Audio Evaluation Tool - Bug #1666
discrete interface: labels may overlap if they are too long

2016-03-13 02:07 PM - Giulio Moro

Target version:				

Description

Currently width of each label is set to equal the length of the inner text, but being their position absolute, they may overlap.
Solution:

constrain the width to the available space so that the text will wrap accordingly.

will require to manually adjust height of the #scale-text-holder and margin of the #slider-holder

History

#1 - 2016-03-13 02:10 PM - Giulio Moro

- Status changed from New to Resolved

Fixed in multiple-tests-concatenation branch 80582bdf9d12

#2 - 2016-03-13 03:00 PM - Giulio Moro

Current fix only works if elements are spread evenly across the range (e.g.: 0 33 66 100 or 0 25 50 75 100)
