

Bela - Bug #1687

gdb and BeagleRT_scheduleAuxiliaryTask

2016-05-15 04:33 PM - Giulio Moro

Status:	Closed	Start date:	2016-05-15
Priority:	Normal	Due date:

Target version:			

Description

It looks like when running within gdb, `rt_task_suspend()` does not work, so that one single call to `BeagleRT_scheduleAuxiliaryTask` causes the task to be repeated over and over again instead of stopping after one execution.

Probably a xenomai issue.
