

Sonic Visualiser - Bug #1797

Should probably restrict Colour3DPlotLayer range in log mode to 80dB (or 100dB? or ...?)

2017-02-23 09:44 AM - Chris Cannam

Target version:			
Description			
<p>The log mode display for Colour3DPlotLayer can get rather murky if the underlying model has some very small non-zero values in it. We should probably clamp it to a range.</p> <p>Best thing may be to follow whatever it is the spectrogram layer does by default.</p>

OK, fixed it to 10 orders of magnitude, as that is what applies when the min is 0 and the threshold kicks in (see #1796).
