

Sonic Visualiser - Bug #1800

Cap'n Proto version test in configure is far too fragile

2017-02-24 03:08 PM - Chris Cannam

| Description | | | |
| <p>Patrick Dupuis writes:</p> <p>I am trying to build Sonic Visualiser beta 3 on Fedora 25. There seems to be a problem with Cap'n Proto (I built 0.6-dev from Git). Here is the what I get when I try and ./configure SV :</p> <p>[...]</p> <pre>configure: checking specifically for a newer Cap'n Proto than the 0.5.3 release checking for capnp... no configure: Failed to find required module capnp using pkg-config, trying again by old-fashioned means checking capnp/common.h usability... yes checking capnp/common.h presence... yes checking for capnp/common.h... yes checking for _ZN5capnp29expectedSizeInWordsFromPrefixEN2kj8ArrayPtrIKNS_4wordEEEE in -lcapnp... no configure: error: Failed to find library capnp for required module capnp</pre> <p>The check I have in configure is dumb: improve it.</p> | | | |

History

#1 - 2017-02-27 01:52 PM - Chris Cannam

- Status changed from New to Resolved

Fixed as of commit:e86e23110e42, using AC_COMPILE_IFELSE instead.

#2 - 2017-03-03 12:01 PM - Chris Cannam

- Status changed from Resolved to Closed
