<b>Target version:</b>			
<b>Description</b>			
<p>hi,</p> <p>in version 3.0, configure.ac looks for `libcapnp &gt; 0.5.3`, but looking at <a href="https://capnproto.org/install.html">https://capnproto.org/install.html</a>, it seems libcapnp 0.5.3 is the latest version.</p> <p>after changing configure.ac to check for `libcapnp &gt;= 0.5.3`, i get a compilation error: "Version mismatch between generated code and library headers. You must use the same version of the Cap'n Proto compiler and library."</p> <p>what am i missing?</p> <p>cheers, piem</p>

For now I'm afraid you need a git checkout of capnproto. There is supposed to be a new release of it quite soon, and I believe the actual version will be 0.6.

See the example in the Sonic Visualiser repo at `deploy/linux/docker/Dockerfile_v3.0_ubuntu1604` for how I handle this in the Ubuntu package build.
