Sonic Visualiser - Bug #1804
Don't insert multiple events at same time from MIDI

Description

At the moment you can do something like this:

  - Start SV, load an audio file
  - Play random stuff on a connected MIDI keyboard
  - Observe at some later point that you have hundreds of points inserted into a time-instant layer in your SV session, all at time 0 but with incrementing bar/beat counts

Not exactly a good idea I think.
