

Sonic Visualiser - Bug #1865

Editing and re-importing CSV file can lose resolution information

2018-11-28 11:26 AM - Chris Cannam

Description			
<ul style="list-style-type: none">- Create an annotation layer with a resolution > 1 sample (any one-sample-per-step analysis)- Export to CSV- Edit the file (I assume this means adjusting sample times, but check this)- Re-import <p>The visual resolution may have changed, perhaps down to 1 sample (I assume because of time adjustments when editing, but again, let's check). Is there a nice way to avoid this?</p>
