Description			
Just tried opening an <a href="#">https:// URL</a> in the 32-bit Windows build (v3.3) - it simply refused, saying immediately that the location could not be opened, without apparently attempting any network traffic and with no record of the request in the log file.			

History

Seems to be also a problem in the 64-bit build (now? always?)

Apparently due to lack of SSL library redistributables. See notes at e.g. <https://stackoverflow.com/questions/20351155/how-can-i-enable-ssl-in-qt-windows-application> and docs for QSslSocket.

#2 - 2019-12-11 08:37 AM - Chris Cannam

- Priority changed from Normal to High

#3 - 2020-01-14 01:22 PM - Chris Cannam

- Subject changed from 32-bit Windows build failed to open https location to Windows build fails to open https locations

#4 - 2020-04-14 02:07 PM - Chris Cannam

Fixed in commit:119588c42772

#5 - 2020-06-29 02:33 PM - Chris Cannam

- Status changed from New to Closed
