

SoundSoftware Code Site - Bug #19

review protection against repository hijacking

2010-10-05 08:28 PM - Chris Cannam

Status:	New	Start date:	2010-10-05
Priority:	Normal	Due date:	
Assignee:	Chris Cannam	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
<p>We need to be extra sure that</p> <p>https://code.soundsoftware.ac.uk/projects/soundsoftware-site/repository/entry/extra/svn/reposman-soundsoftware.rb</p> <p>won't ever assign to a project a repository that belongs to another one. For example: can a subproject have the same name as a top-level project? If a repository exists at all when this script runs, it shouldn't ever assign it to any project other than the one it's already assigned to.</p> <p>Review this. Also, document the procedure as we now have it at https://code.soundsoftware.ac.uk/projects/soundsoftware-site/wiki/AuthenticatingHg (refer to issue #9).</p>
