Description

Dear developers,

I happen to work with restored pitchtracks from very old audio sources, and I don't find a way to make a note analysis from it, not having the restored audio.

If I understand well, Tony is always doing "Audio import => FFT => Pitchtrack => Note analysis".

So far, it is not possible to only import a pitchtrack, and to do the note analysis without any audio file.

As tony is by far the most reliable and the most ergonomic tool to provide note data, it would be great to open the range of the possibilities by making the FFT analysis optional.

ps: Pardon me if this is not the good place to ask !
