

SoundSoftware Code Site - Feature #2

Quickly-visible project status information

2010-07-28 04:50 PM - Chris Cannam

Status:	New	Start date:	2011-01-25
Priority:	High	Due date:	
Assignee:	Chris Cannam	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
<p>Projects are likely to have various possible statuses:</p> <ul style="list-style-type: none">- Usable, not really usable yet, just a sketch- Library, application, MATLAB script...- Something being developed "here", something we're mirroring and building, something abandoned elsewhere...- Something related to a particular publication <p>Also, relationships between projects (X depends on Y).</p> <p>If there is a standard vocabulary for this, we should probably use that (there may be several "standard" vocabularies).</p> <p>Principles:</p> <ol style="list-style-type: none">1. We may need to manage a very large number of projects (thousands) some of which may be very small2. We are supposed to have more awareness of our domain than most code repositories do -- so that we can provide meaningful relationships between projects, or indexing etc that is actually useful to academic researchers			
Subtasks:			
Feature # 69: Project list should identify projects that are not hosted here			New
