

SV App Framework - Bug #258

[PATCH] Fix for Qt 4.8 disallowing virtual inheritance of QObject

2011-08-10 03:44 PM - Michel Alexandre Salim

Status:	Closed	Start date:	2011-08-10
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
<p>Qt 4.8 now disallows virtual inheritance of QObject, affecting Fedora 16, Rawhide, and potentially other distributions shipping KDE 4.7 / Qt 4.8; for more details, see</p> <p><a href="http://article.gmane.org/gmane.linux.redhat.fedora.devel/152225">http://article.gmane.org/gmane.linux.redhat.fedora.devel/152225</a></p> <p>This patch removes such an occurrence in svapp, replacing virtual with normal inheritance. Done against the current hg tip.</p>
