

SoundSoftware Code Site - Bug #259

Queries on Author name need to search Authorship instead

2011-08-10 04:50 PM - Chris Cannam

Target version:	Bibliography Alpha		

Description

Currently we have a name column in the Author table which is almost certainly redundant. Queries on this column should be using Authorships instead.

Illustration:

Say I have a user "chrisca", name "Chris Cannam". I have publications in the names "C Cannam" and "Christopher Cannam".

When I type "can.." into the author field for a new publication, I expect to see the autocomplete options

- Chris Cannam [at my institution]
- C Cannam [at instition I was at when I published first paper]
- Christopher Cannam [likewise for second]

the latter two are entirely Authorship records, not Author records (since we have a 1-1 relationship between the purely nominal Author object and the User).

History

#1 - 2011-08-10 04:52 PM - Chris Cannam

- Description updated

#2 - 2011-08-19 02:57 PM - Chris Cannam

- Status changed from New to Closed

Done, thanks!
