Description

Dear SoundSoftware team,

In forum posts, the wiki and other places that use the text editor with the [bold] [italic] ... [image] buttons on top, I would like to be able to post files and images inline. Clicking the [image] button, I would like a file dialog to open that lets me choose the image and insert it at the cursor.

Similarly, it would be great to have an additional button for nondescript file upload that behaves in the same way.

A nice additional feature would be for those kind of files to be listed in downloads or a similar central file listing.

Would be happy to discuss, too!

Matthias
