EasyMercurial - Feature #491
Support phases in order to know which changes have not been pushed

2012-07-03 01:41 PM - Chris Cannam

Target version:			

Description

Phases (introduced in Mercurial 2.2) provide a nice simple way to discover whether a change has ever been pushed to another repo (among other useful things).

If a new enough version of Mercurial is available, EasyHg should use phases in order to (at least) notify the user that some changes have been committed but not pushed.
