

SoundSoftware Code Site - Feature #602

Feature # 562 (Closed): Overhaul project discovery

"Explore" page: Find trustworthy projects

2013-06-21 10:48 AM - Chris Cannam

Description			
<p>The initial Explore page feature request (#564) called for exploration in four directions: Active, Relevant to me, Complete or respected, and through search/tag.</p> <p>The current page handles Active and search/tag (at least somewhat). Relevance is partly handled through the My Page box showing what my colleagues are working on, though we could use (separately) a relevance browser for wider projects and non-registered users.</p> <p>That leaves Complete or respected. There is a partly-implemented Mature Projects metric for this, but it isn't good enough.</p>			

History

#1 - 2014-03-21 02:33 PM - Chris Cannam

- Status changed from New to Resolved

Updated the Mature Projects metric. See commit:467282ce64a4, commit:523f55b47b98, commit:fb773fcf9af8, commit:9f37f7e39d3c, commit:fae089e1f1a3

- It uses maturity (number of members, publications, downloads etc) only to establish a fairly low threshold for candidacy
- After eliminating projects that are "too immature" or have no description or managers, it selects at random N projects that have no managers in common.

This is then used to power the "Featured" box in the Explore page. So far I think it works quite well.

#2 - 2014-03-21 02:35 PM - Chris Cannam
